

Flowchart SARS-CoV-2 policy during pregnancy and birth

Because the NVOG, KNOV and NVK consider the collection of data about pregnancy and the period after birth and COVID-19 infections to be very important, we ask healthcare providers to report all pregnant women with a COVID-19 infection, in home isolation or hospitalised, via NETHOSS (Netherlands Obstetric Surveillance System). Hospitals can register via the usual route (midwives and general practitioners can also use this reporting method); the appointed NethOSS contacts receive secure registration emails (if you have any questions, contact info@nethoss-perined.nl)
